GDV Health Assessments

The **GDV** (Gas Discharge Visualisation) camera takes a picture of the energy flow or light emitted out of all ten of your fingertips. The images are translated and converted to a unique “photonic profile” simply charted, to analyse how the body is functioning in the moment.

GDV Health Assessment appointments can be made by anyone who would like to see what their state of health is at present.

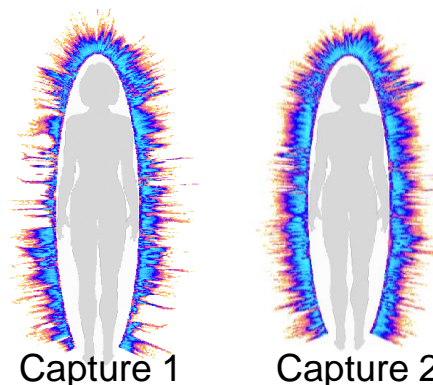

Since we live in a dynamic world it is amazing to see how our body responds to various care over time. The pictures to the right show a comparison of one individual on two different occasions, with a noticeable improvement in various organ function, and a balancing of their chakra energy centres. Bronwyn is planning to use the device to do extensive research in the near future..

The benefits of the GDV Health Assessment are:

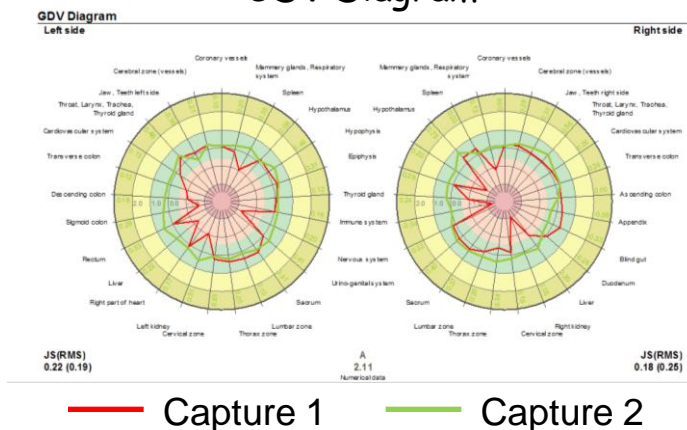

- it is pain-free,
- it takes only a few minutes and
- the results are available immediately (unlike other routine medical tests).

The assessment, including a printed outline of the information presented is an affordable fee of \$40. Book your appointment with Jenni or Ann to see Bronwyn.
